Accessories

TO COMPLETE YOUR ROOF

Ventilation

Borga Vents provide superior performance in an esthetically enhanced design. It is intended to be used as either an intake or exhaust vent providing a balanced ventilation system that not only satisfies building code requirements, but extends the life of the entire roof system.

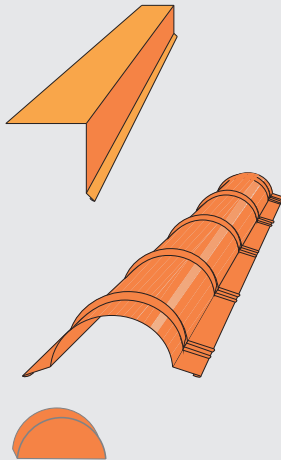

Flasher

For some specific solution you can use a gasket flange. The popular Borga Flasher is mostly used as a sealer around ventilation pipes with a diameter from 50 mm to 480 mm.

Trims

Together with your chosen roof profile you can get ready set of trims. The trims are made from the same steel as your roof profile.

Trims are important to finish the installation and create a final nice look, we recommend to use only products from Borga product range.

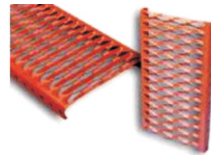

Paint

While ordering a roof it is good to consider the need for a small amount of touch up paint. The paint is required for repairing small mechanical damages. Exists in full range of colors.

Roof steps

Roof steps should be used when walking is needed on certain areas on the roof. Roof steps and roof benches are fastened to a bracket, which is screwed through metal sheet to supporting wooden purlin. Assembly is easy and simple. Available in the color of your roof.

Ridge strips

Ridge strips

Used on the ridge to give good ventilations and dirt protection. Stops the rainwater going under the roof sheets but allows the moisture from inside to go out. The strip is highly durable and UV resistant.

Fasteners

The quality of fasteners is directly connected to durability of all sheeting. Borga fasteners is a high quality product and gives security for your installation. You will find more information in Borga fastener brochure.

To complete and finish a good roof installation you need many different products. All of them are available in Borga product range and designed to fit in Borga roof system. You order them together with your roof sheets.

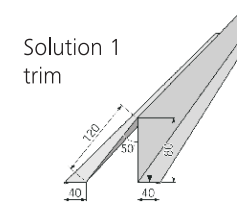

Thermal insulation

You can order of variety of different types of insulation. All made to fit your specific need in your building. Borga offers only high quality material produced by leading manufacturer in Europe.

Snow protection

There are two main solutions of snow protection in Borga system. One is based on regular trim solution - this is more economic and easier to install solution (1). The second - snow fence (2) is more stable and safer for areas with higher snowload.

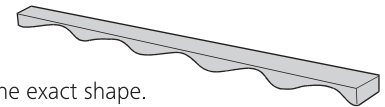

Solution 1 trim

Solution 2 snow fence

Closure strips

To each Borga sheet profile there is a closure strip with the exact shape. It shall be placed between the ridge cap and the roof sheet. The strips are made out of high quality material to give durability and fit in Borga roof system.

Small accessories

Socket key is a 8 mm sleeve with a spring inside. It is used for installing the Borga fasteners.

Borga Sealant is mainly used to seal roof and gutter connections.

Eave comb protects against debris coming under the sheets.
